

Parham Landing Water System – 2020 Water Quality Report

The Parham Landing Water System serves Henrico Regional Jail East, Eltham Industrial Park, Weir Creek Industrial Park and select industrial & commercial business along the Rt 33 corridor near Eltham. There are no residential customers on the Parham Landing Water System.

SOURCES AND TREATMENT OF DRINKING WATER

The source of the drinking water is groundwater. Well #1 is located on Route 30 at the jail and Well #2 is located on Route 33 across from Weir Creek Industrial Park. Water from each well is disinfected with sodium hypochlorite solution and poly-phosphate is added as a corrosion inhibitor.

The Virginia Department of Health conducted a source water assessment of the two wells in 2019. The wells were determined to be of low susceptibility to contamination, using criteria developed by the State in its EPA-approved Source Water Assessment Program. The assessment report consists of maps showing the source water assessment area, an inventory of known land use activities of concern, and documentation of any known contamination within the last 5 years from the date of the assessment.

WATER QUALITY RESULTS

I. Microbiological Contaminants

Contaminant	MCLG	MCL	Number of Samples Indicating Presence of Bacteria	Violation (Y/N)	Month of Sampling	Typical Source of Contamination
Total Coliform Bacteria	0	Presence of bacteria in more than one sample per month	0	No	Jan-Dec	Naturally present in the environment

II. Lead and Copper Contaminants

Contaminant	Units of Measurement	Action Level	MCLG	Results of Samples for the 90 th Percentile Value	Action Level Exceedance (Y/N)	Month of Sampling	# of Sampling Sites Exceeding Action Level	Typical Source of Contamination
Lead	ppb	15	0	2.42	No	9/2019	0	Corrosion of household plumbing system; Erosion of natural deposits
Copper	ppm	1.3	1.3	0.261	No	9/2019	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives

III. Other Chemical and Radiological Contaminants

Contaminant	Units of Measurement	MCLG	MCL	Level Detected	Violation (Y/N)	Range of Detection at Sampling Points	Date of Sample	Typical Source of Contamination
Combined Radium*	pCi/L	0	5	0.2	No	0.2-0.2	9/2018	Erosion of natural deposits
Gross Alpha	pCi/L	0	15	<0.43	No	<0.34-<0.43	9/2018	
Gross Beta**	pCi/L	0	50	5.6	No	4.2-5.6	9/2018	Erosion of natural deposits; decay of man-made deposits
Nitrate	ppm	10	10	<0.05	No	N.D.-N.D.	11/2020	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Fluoride†	ppm	4	4	2.4	Yes	2.16-2.4	9/2018	Erosion of natural deposits
Trihalomethanes	ppb	80	80	22	No	--	9/2020	By-product of naturally occurring organic matter and chlorine added to the water
Haloacetic Acids	ppb	60	60	2.6	No	--	9/2020	

* Since Radium-226 is an alpha emitter, Gross Alpha Activity is used in place of Radium-226 when Radium-226 has not been analyzed.

** The PMCL for beta particles is 4 mrem/year. EPA considers 50 pCi/l to be the level of concern for beta particles.

III. Unregulated Contaminants

Contaminant	Units of Measurement	Level Detected	Violation (Y/N)	Range of Detection at Sampling Points	Date of Sample	Typical Source of Contamination
Sulfate	ppm	14.5	No	14.2-14.5	9/2018	EPA and State Regulations require us to monitor this contaminant while EPA reconsiders its MCL.

IV. Disinfectants

Disinfectant	Units of Measurement	MRDLG	MRDL	Level Detected (Annual Average)	Violation (Y/N)	Range of Detection at Sampling Points	Year	Typical Source
Chlorine	ppm	4	4	0.58	No	0.43-0.71	2020	Water additive used to control microbes

ADDITIONAL HEALTH INFORMATION

Samples collected in September 2018 indicated that **the drinking water from this water system contains sodium at concentrations of 184 mg/l at Well #1 and 198 mg/l at Well #2.** Persons on a restricted sodium intake diet should not drink water containing a sodium concentration exceeding 20 mg/l.

†VIOLATION INFORMATION

The fluoride level exceeded the Secondary Maximum Contaminant Level (SMCL) of 2.0 for which notification is required, but did not exceed the Primary Maximum Contaminant Level (PMCL) of 4.0 ppm.

†REQUIRED FLUORIDE PUBLIC NOTIFICATION

The U.S. Environmental Protection Agency requires that DPU provide you this notice on the level of fluoride in drinking water from this water system. Federal regulation requires that fluoride which occurs naturally in your water supply not exceed a concentration of 4.0 mg/l in drinking water. This is an enforceable standard called a Primary Maximum Contaminant Level (PMCL) and it has been established to protect the public health. Exposure to drinking water levels above 4.0 mg/l for many years may result in some cases of crippling skeletal fluorosis, which is a serious bone disorder. Federal law also requires that we notify you when monitoring indicates that the fluoride in your drinking water exceeds the Secondary Maximum Contaminant Level (SMCL) of 2.0 mg/l. This SMCL is intended to alert families about dental problems that might affect children under nine years of age.

The drinking water from the Parham Landing Water System has a fluoride concentration of 2.16 milligrams per liter (mg/l) at Well #1 and 2.40 mg/l at Well #2.
